

Proposal For

Billing Management Tool for Dentist

1. Overview of the project

This document is developed based on our understanding and details shared by the client.

The client wants to develop a fix billing management tool for the dentist or assistant doctor that will help to create

1. Patient appointment
2. Tooth treatment billing in short possible time with fix rate set by administration and reception or account staff
3. Easy billing collection and can generate print of the bill at reception
4. Doctor wise report will generate monthly and annually. [Date, Patient name and Billing amount]
5. Donar discount facility also available in this billing doctors or accounting staff can apply this easily.

2. Project deliverables

- Web app for Dentist
- Web admin panel for Administration (super admin)
- Web app for receptionist/account department

3. Purpose of the project

- The purpose of the project is to build a web app for apply fix billing amount treatment wise

4. Stakeholders

- Administration - the administrator will add and set the fix cost for the treatment and can edit or delete
- Account / Reception staff – staff will generate a) Print bill or can apply donor discount (if applicable) b) Dentist wise report.
- Dentist – Dentist will create billing as per treatment and can apply donor discount

5. Scope of the project

5.1 For Dentist (Web app)

5.1.1 Login

- The Dentist can log in to the account by using a registered email address and password.
- There will be a forgot password option that will help the Dentist to reset the password of the account.

5.1.2 Home

- The home page will show the summarised details of the application.
- The home screen will show the following details:
 - Total number of appointments for the day
 - The total number of the treatment's selection
 - Appointment Notification
 - The total patient allotted for the month / Year

5.1.3 List of appointment

- This section will show the list of the patients allotted to the Dentist.
- There will be an option given to search the patient list based on the date.

5.1.4 Treatment details

- The Dentist can view the treatment details by selecting the treatment from the list which will include the following information:
 - Date
 - Treatment Name with fixed cost
 - Next visit box
 - Option to Submit

5.1.5 Alert notifications

- Dentist will receive an alert notification about appointment

5.1.6 Logout

- This option will allow the dentist to log out from the account.

5.2 For Reception (admin)

5.2.1 Login

- The reception can log in to the account by using a registered email address and password.
- The password can be recovered from forgot password function.

5.2.2 Dashboard

- This will have the summarized report on admin panel. This will help the receptionist to set appointment and print bill of the treatment
- The dashboard will show
 - Add Patient
 - Set Appointment
 - Total number of appointments set doctor wise
 - Total number of appointments completed
 - Add paid Billing amount and set discount (if required)
 - Take a print out of completed appointment (if required)

5.2.3 Manage Patient

- View add patient
 - The receptionist will add patient
 - The form will show the
 - *Date
 - *Patient name
 - *Mobile Number
 - Address
 - Sugar
 - Blood Pressure
 - *Age
 - Height
 - Weight
 - The Dentist (task allotted to)
 - Select case paper fee for a month
 - The receptionist can search the patient for set the new appointment.
- View / set appointment
 - The receptionist will have the option to set appointment of patient with doctors list.

- The set appointment will show
 - Select Date
 - Select patient
- Select doctor
 - Submit
- Add Billing
 - The receptionist will have the facility to add paid amount and apply discount and take a printout of the completed appointments.
 - To add a new task the Commissioner will have to provide the following information
 - Date
 - Select Patient
 - Add paid amount in the text filed
 - Add discount in amount (in case patient is donor)
 - Submit

5.2.4 Logout

- The receptionist log out from the account whenever required.

5.3 Account (Super admin)

5.3.1 Login

- The account can log in to the account by using a registered email address and password.
- The password can be recovered from forgot password function.

5.3.2 Dashboard

- This will be a super admin, anything related to billing have full access [Add / Edit / Delete]
- The dashboard will show
 - Add Users / Manage User & Set Role of the user
 - Add Treatment / Manage Treatment [with cost]
 - Generate report [doctor wise / Month wise / Yearly]
 - Monitor appointments (view / edit / delete)
- Add User
 - The accountant will have the facility to add user and set the role [Dentist / Receptionist]

- *User Name
- * Mobile Number
- *Address
- * Adhar Card Number
- * Age
- * Gender
- *Email id
- * Password
- * Confirm Password
- * Select Role
- Submit

- Add Treatment

- The accountant will have the facility to add treatment with fixed price set by management

- *Select Treatment
- Add treatment details
- *Add cost of the treatment
- Submit

- Generate Report

- The accountant will have the facility to generate reports. Report will generate in xls and pdf format

- *Select dentist name
- * Select duration
- Submit

5.3.3 Logout

- The accountant will log out from the account whenever required.

6. General Architecture Diagram

7. Methodology Approach

Agile Project Management Process

Years of experience in software development have helped us develop a set of standard processes

that guarantee the successful delivery of cutting-edge technology projects. We follow agile software development methodologies at **Eternity System Group Inc.** Below are various technology stages in our agile software development model –

Initiation

Our team of expert Business Analysts studies & analyze your requirements & document all the details systematically. We study your business domain and propose the best possible solutions to your problem statements. We prepare a high-level business requirement document that contains the details of all the understood requirements. On approval of the business requirement document (BRD), another document is prepared which contains the details of the flow of each & every functionality in the proposed solution so that you get to know how things will work. It also contains high-quality mockups or prototypes also known as wireframe models which give you a complete idea & visualization of the product that is going to be delivered. This document is known as the Functional specification document (FSD) which is another deliverable of the initiation stage. The first draft of FSD thus prepared is sent across for your approval which is open for modifications so that we can revise the functional flow as per your inputs & update you accordingly. Approval of FSD from the client marks the completion of Phase 1 which is “Initiation”.

Planning

In this phase, we estimate the required efforts, timeline & budget. We create a work breakdown structure/timeline which provides you with a complete estimation of the required time for your agreed project work. Also, we follow these WBS & deliver work phase-wise in various Sprints.

Execution and Control

In this step, we deliver project work phase-wise after QA (testing) after the completion of each sprint as per the agreed WBS for your review & suggestion. We are open to modification with reference to your valuable comments so that any unexpected changes in requirements late in the development life cycle can be avoided. We follow this process week after week till the final phase delivery is confirmed.

Closing

On final project confirmation we make the site or application live on your server & once again perform through QA & provide you with instructions for proper UAT and acceptance. Once successful UAT and CUG(Beta) testing is done the site/app is deployed in the production environment and made available for public access.

8. Assumption

- The client will provide (if required) third-party paid APIs for the project.
- Brand name(s) and Logo(s) will be provided by the client.

9. Risk

If a client can not provide any of the third-party paid APIs on time, the features dependent on those APIs will be put on hold. Meaning, The functionality temporarily will be frozen until the third-party paid API has been sent by the client and the client will be responsible for the delay.

10. Dependency

Until the client confirms the critical design issue (i.e. the confirmation required on the design layouts to proceed for development), and other deliverables for each milestone, the Eternity System Software may not proceed with further development. And if response time from the client is delayed that will impact the project timeline as well.

11. Resource Allocation

Resource size	Experience (in years)	Number
Lead Developer	7+	1
Senior Developer	6+	2
Junior Developer	3+	1
Quality Analyst	7+	1
Project Manager	9+	1
Design Engineer	6+	1

12. Technical Requirements and Tools

Development End	Technology used
Front-end/HTML	Angular/ React.js
Backend	CodeIgnitor / Word Press
Design layouts	Adobe Photoshop CC, Figma.
Database	MySQL/MongoDB

13. Project Cost, Time Estimation

The cost & timeline mentioned in this quotation is for the development of the mentioned project.

Sr No	Project	Price (In INR excluding GST)	Business Days
1	Development of Billing Management Application - Web (Backend)	2,15,500	62

14. Maintenance and additional services packages

Sr No	Project	Price (In INR excluding GST)
2	Support & Maintenance – Annual [30 hrs] (from Next Year of Deployment)	25,000
3	Server Hosting - Annual	9,999
4	Visiting Charges (Optional) (Per Visit)	3,000
5	2 Online session of application usage training after deployment	0,000
6	Online support / training charges per hour (optional)	1,500

NOTES

1. The client is responsible to purchase APIs if required (Will be only applicable after detailed scope documentation).
2. The quotation offer will be **valid** for **15 days** from the date of the document.
3. Eternity System Software should receive the project charges excluding any remittance/bankcharges.
4. Our working days are Monday to Friday (Working Hours: - 9:30 AM to 6:30 PM)

15. Agreement

Eternity System Software will provide one month's free support after the site has gone live. Any bugs will be fixed by Eternity System Software during the stipulated time.

Post Implementation and transition

Handoff process (from/to):

The development process will be carried out on servers owned and maintained by Eternity System

Software. Once the development process and the final testing commence. After receiving the full Project Amount, the entire application with the codebases will be transferred to the client's servers. The client servers will be accessible for one week after that for testing and bug rectification if any.

IN WITNESS WHEREOF, both the parties have executed this Agreement as of the dated September 1, 2023, first written below.
